

Market Segmentation Template

Step 1: Brainstorm Broadly Potential Market Segments for Your Idea/Technology/Product

What is my idea or technology?

Access is a platform that provides an accessibility mapping allowing individuals with mobility challenges to easily navigate urban areas. It enables users to report inaccessible sidewalks, view live accessible routes and receive updates about public construction. The platform includes a real-time map, image-based reporting, customizable UI/UX for accessibility and statistics for municipalities. The system consists of one **mobile app** for users to navigate and report inaccessible pathways, and one **web app** for municipalities to view statistics and publish scheduled constructions.

What industries and end users could my idea or technology apply to?

Industry or Similar Category	End Users	What They Would Use It For
Local Government	Municipality Staff	Monitor accessibility issues, publish scheduled construction and plan urban improvements
Urban Planning	Engineers, Designers	Analyze user data to design accessible infrastructure and prioritize public constructions
Public	Individuals with Disabilities	Navigate safely through the city, avoid inaccessible areas and submit real-time reports
Local Business	Café, Restaurants, Stores	Promote their business as accessible friendly to attract more customers
Tourists & Travel Agencies	Visitors with Disabilities	Discover accessible pathways and avoid disruptions due to public constructions
Accessibility Advocacy	NPOs, Disability Groups	Use map data to promote inclusive urban design
Smart City/GovTech	Tech Integrators	Integrate ACCESS data into smart infrastructure and dashboards

Step 2: Narrow Down This Broad List of Potential Market Segments to 6-8

Top target Markets to Consider for My Startup

End user	Target customer s well-funded?	Target customer readily accessible to sales force?	Target customers' compelling reason to buy?	Can you deliver a whole product ?	Is there entrenched competition?	Can you leverage this segment to enter others?	Consistent with values, passions, goals of team?	Rank
Citizens with mobility disabilities	No	High	Yes - safe, accessible navigation(vital)	Yes	Low	Yes	Yes	1
Municipalities	Yes	Moderate	Yes - need tools for smart urban planning & accessibility compliance	Yes	Low	Yes	Yes	2
Local Businesses (cafés, stores)	Yes/No	High	Yes - reputation need and accessible environment	Yes	Low	Yes	Yes	3
Accessibility NPO's	Yes/No	High	Yes - need data to advocate and act	Yes	Low	Yes	Yes	4
Urban Planners	Yes	Low	Moderate - depends on city's budget & policies	No	Moderate	Yes	Yes	5
Visitors with Disabilities	No	Moderate	Yes - accessible travel experience	Yes	Low	Yes	Yes	6

Step 3: Drop These Market Segments Into a Matrix and Review/Update the Rows for Your Situation

Market Segmentation Matrix Row Definitions

Market	Public	Local Government	Local Businesses	Accessibility Advocacy	Urban Planning	Tourists & Travel Agencies
End User	Citizens with mobility issues	Municipalities	Cafés, Restaurants, Stores	Accessibility NPO's	Urban Planners	Visitors with Disabilities
Task	Navigate safely, avoid inaccessible pathways, report obstacles.	Monitor & act on accessibility reports, analyze statistics.	Promote themselves on a bigger platform as accessible and friendly.	Use data to advocate for change.	Design more accessible pathways for every citizen.	Plan accessible routes when visiting cities.
Benefit	Independence, peace of mind, real-time information, safer mobility.	Smart decision-making, compliance, citizen satisfaction	Increased visibility & inclusion	Actionable evidence	Better planning based on real citizen data	Confidence, barrier-free travel experience
Urgency of Need	High	High	Moderate	High	Moderate	Moderate
Example End Users	Wheelchair users, elderly citizens, parents with strollers	Municipality of Chalandri, Municipality of Athens	Restaurants, Cafés	European Disability Forum	Urban design teams, engineers	Travel agencies offering disability friendly routes
Lead Customers	Influencers with disabilities	Municipalities with accessibility goals	Chains supporting inclusivity	Accessibility communities, local disability groups	City infrastructure departments/staff	Accessibility focused tourism providers
Willingness to Change	High	Moderate	Moderate	High	Moderate	High
Frequency of Buying	Rarely - Only for strong personal benefit	Per project - 3+ months	Occasionally - Based on visibility gains	Rarely - Support campaigns	Per project - 3+ months	Rarely - Support campaigns and support accessibility
Concentration of Buyers	Many Competitive buyers	Oligopoly	Many Competitive buyers	Oligopoly	Oligopoly	Many Competitive buyers

Other relevant market considerations	Highly viral (WOM) among communities with mobility disabilities (growth by social need)	High bureaucracy and long cycles, but public pressure accelerates action	Low margin segment, motivated by social proof or local reputation	Mission-driven, often backed by grants or donor reporting cycles	Project-based cycles, dependent on government fundings	High seasonal variability but strong WOM through influencer reviews
Size of Market (# of end users)	4B~5B	500K~600K	10M~100M	50K~200K	500K~1M	500K~1M
Est. value of end user (\$1, \$10, \$100, \$1K, etc.)	\$0-\$10	\$10K-\$100K	\$100-\$1K	\$1K-\$10K	\$5K-\$50K	\$1K-\$10K
Competition/alternatives	Competitive alternative apps (Wheelmap, Google maps)	Analysts	Google Maps	DIY map	Other analysts that are conducting research and mapping the streets	AccessibleGo, Google Maps
Other components needed for a full solution	Software for automating the accessibility report system, algorithms for navigation	Public construction management	Accessibility certification, user reviews for accessibility	Advocacy and Awareness campaigns and petitions	Access to crowdsourced data for city planning	Integration with travel APIs
Important partners	Community groups and online forums	Smart City platforms, Governmental construction and infrastructure departments	Business review platforms (Google Maps), Local business associations	Disability Advocacy organizations, universities, volunteer networks (ABC genZ)	Municipal planning departments, City planning software providers (ArcGIS)	Accessible tourism initiatives and agencies
Other relevant personal considerations	Deeply passionate about inclusion and accessibility and personal drive to impact lives, any urban areas with accessibility challenges, disability rights advocates	Experience with civil tech and knows how public procurement works, prioritizing smart city and inclusivity initiatives	Tourist-heavy districts, city centers, social responsibility	Passion for advocacy and equity	Background in urban studies, smart city projects, architecture firms	Strategic location advantage and personal experiences with inaccessible travel inspires the vision

Calculate the TAM for the beachhead market

TAM is the “pie in the sky” number. It represents the absolute maximum possible revenue that a business could generate in the market, if every single potential customer is converted into a paying customer, and each of those customers is providing the full maximum revenue.

**Bottom-up
approach**

**Top-down
approach**

Bottom-Up TAM Analysis Summary

I.	One Time Charge Data Point	
Ia	Estimation of price per unit	1000\$ (all except public users)
Ib	Number of units needed per end user	1
Ic	Average life of product in years	2
Id	Annualized revenue(Ia*Ib)/Id (Data Point I)	500\$
2.	Budget Available Data Points	
a	Current spending per end user (Data point 2)	200.000\$
2b	Total budget for the end user	1.000.000\$
2c	What percentage of the budget could go to this solution reasonably?	15%
2d	Annualize revenue (2b*2c) (Data Point 3)	150.000\$
3.	Comparables	
3a	Who are the comparables for your business?	Social Impact, Coloplast, Citymapper Ltd
3b	What are the comparable products?	Wheelmap, Wheelmate, Citymapper
3c	What is the comparable converted to similar annualized revenue (Data Point 4 plus however many more you deem relevant)?	100M
4.	Interpreting the Results	
4a	Consensus on estimate of annualized revenue per end user, based on the four Data Points above (range is fine)	\$15,000 – \$60,000
	How did you end up at this number/range?	Since ACCESS offers a more tailored solution (real-time accessibility mapping, AI-powered reporting, city dashboards), the

pricing aligns with **\$15,000–\$60,000 per end user annually**.

Top-Down TAM Analysis

Summary

	Title	Estimation	Source/ based on:
1	Total # of end users in the broad market segment	~1B	Estimated based on people with mobility disabilities worldwide (~4.2B disabled people, ~20% with mobility challenges), municipalities, urban planners, accessibility NPOs, businesses (restaurants, cafes, hotels, travel agencies), and tourists.
2	Total # of end users in the targeted subsegment of your Beachhead Market	50.000 - 200.000	Focused on municipalities, urban planners, accessibility organizations, and businesses in top cities where accessibility improvements are actively pursued.
3	Annual monetizable revenue per user	15.000\$ - 65.000\$	Based on budget allocation estimates (10–40% of accessibility budgets), comparable SaaS models (Mapbox, ArcGIS, Wheelmap), and per-user spending trends.
4	Estimate of top-down TAM (line 2 times line 3)	750K - 130M	(50,000 users × \$5,000) to (200,000 users × \$20,000) → Shows total potential revenue in Beachhead Market.
5	Estimate of range of profitability for your product	20%-50% EBITDA margin	Based on SaaS industry benchmarks, GIS and smart mobility software margins, and accessibility-focused platforms. High scalability and low marginal costs make profitability attractive.
6	Estimated Compound Annual Growth Rate (CAGR)	15% – 30%	Accessibility tech and smart city industries are growing rapidly. Estimated based on growth rates from GIS software (~12%), urban mobility (~20%), and

			accessibility technology (~25%).
7	Estimated time to achieve 20 percent market share	2-3 years	Based on SaaS adoption cycles, government procurement processes, and municipal policy changes.
8	Anticipated market share if you are reasonably successful	30% – 50% of target market	If ACCESS becomes a leader in accessibility mapping and municipal integrations, it can capture a dominant market position in its niche.
	What are the three top assumptions that could affect the attractiveness of the Beachhead Market for your product (besides the product itself)?	1. Government and municipal adoption rate • If municipalities and urban planners slowly adopt accessibility solutions, growth could be hindered. • Mitigation: Build strategic partnerships with governments and NGOs. 2. User engagement and crowdsourced data contribution • The value of ACCESS depends on real-time, accurate reporting. • Mitigation: Incentivize contributions via gamification, rewards, and AI automation for data collection. 3. Competitive response from large mapping companies • Companies like Google Maps or Apple Maps could improve their accessibility features, reducing demand for standalone solutions. • Mitigation: Focus on hyper-local, real-time updates and partnerships with disability advocacy groups.	

Competition Analysis

A competition analysis plays an important role. Making a competition analysis to know enough about competitors is very important for business. By doing the analysis, you will identify the strengths and weaknesses of current and potential competitors and establish what makes your product or service unique, so that you can develop the correct strategy to win the battle. Here are **4 charts** business people often use when doing a competitor analysis.
